**Alianza Reginal para la Conservación de Pastizales del Desierto Chihuahuense
Chihuahua, México**

I consider that it is important for the CEC to continue its support to grassland conservation in the 3 countries. Particularly in Mexico we are experiencing the biggest loss of native grasslands due to land use changes, primarily due to intensive agriculture. The problem is complex, and despite local actions, the degradation process continues. We are losing critical habitat for T&E species such as golden eagle, pronghorn and prairie dogs.
