

# Innovating for a sustainable future

# Innovation Hubs For Sustainable Economies

## Why this matters to you:

In Canada, Mexico and the United States, “innovation centers” are providing the tools to convert ideas into feasible products and businesses. These centers offer facilities, expertise, and services to facilitate entrepreneurship, creativity, and interdisciplinary collaboration. By enhancing the capacity of existing innovation centers in each country and linking them with each other through a network focused on sustainable innovation, the CEC is contributing to the empowerment of young entrepreneurs and accelerating sustainable growth in North America.

---

**THE CEC IS SUPPORTING THE CREATION OF A NORTH AMERICAN SUSTAINABILITY INNOVATION CENTERS NETWORK FOR YOUNG LEADERS AND COMMUNITIES TO ADVANCE ENTREPRENEURSHIP AND SUSTAINABLE GROWTH.**

---

## Because of the CEC...

- There is now a network of innovation centers among academic institutions in North America to accelerate sustainable growth.
- Innovation centers are working together to improve sustainable design and entrepreneurship education, training, and mentoring for students and communities.
- Increased collaboration and new partnerships have been established to foster the success of future leaders in sustainable innovation.
