Mérida, Yucatán

14 July 2022

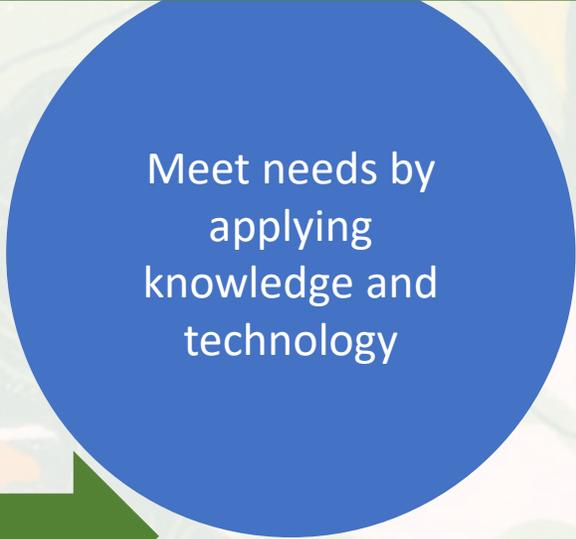

## Knowledge management for local development

- Knowledge is energy: It can't be managed per se

But what can be managed are processes and spaces for knowledge creation

- Intersectoral and intergenerational knowledge dialog

# Revaluing

- Restoring to something the value or respect it once had
- Traditional knowledge doesn't need to be "rescued." It needs to be **respected** and **valued**

## Nature or community based solutions and traditional knowledge

- NbS: Actions which make use of nature to address social challenges
- CbS: Actions that build on community diversity

What does this line signify?

---

- Traditional knowledge is genuine, valid and valuable, and always has been

# Traditional agroecological techniques and systems

# Thank you for your interest!

G. Mahelet Lozada Aranda
